Linear Ball Spline

All IKO products are built with advanced technology and the highest quality

Machined Type Needle Roller Bearings
A compact bearing with a low sectional height and large load ratings. The outer ring has high rigidity and can easily be used even for light alloy housings.

Shell Type Needle Roller Bearings
The outer ring is made of carburized and quenched thin special steel plates, making it the smallest, lightest and most compact needle bearing in terms of sectional height.

Cam Follower
Bearings that have a stud in which needle rollers are incorporated in a thick walled outer ring. Since the studs already have threads, they are easy to mount. They are widely used as follower bearings for cam mechanisms and for linear motion purposes.

Roller Followers
Bearings designed for outer ring rotation in which needle rollers are incorporated in a thick walled outer ring. They are widely used as guide rollers for cam mechanisms and for linear motion purposes.

Crossed Roller Bearings
Compact bearings with their rollers alternately crossed at right angles to each other between inner and outer rings. It allows the bearing to handle complex loads simultaneously from any direction.

Linear Way L Series
Compact linear motion rolling guide with a minimum rail width of 1 mm. Assures stable accuracy despite the super small size and light weight. Maintenance free specifications are available as standard.

Linear Way E Series
A versatile, compact, general-purpose linear motion rolling guide available in a variety of shapes and sizes. Maintenance free specifications are available as standard.

Linear Ball Spline G Series
A compact linear motion rolling guide in which an external cylinder makes linear motion along the spline shaft. Stable accuracy and rigidity can be achieved even in applications where complex loads are applied. Maintenance free specifications are available as standard.

Precision Positioning Table TE
Light weight and compact positioning table with high-strength aluminum alloy used for the main components. It utilizes a ball screw and also has our maintenance-free C-Lube component built into the linear motion rolling guide which provides long-term, maintenance-free performance.

Linear Motor Table LT
A positioning table made of aluminum alloy with an optical linear encoder built in and with AC linear servomotor incorporated between a moving table and bed. The advanced servo technology achieves high static stability and speed stability.

A line up of products with specifications that are ideal for food and beverage machines

Maintenance-Free C-Lube Products for Food Machinery
Our maintenance-free C-Lube technology utilizes a solid-type lubricant. It can be paired with NSF H1-certified lubrication oil and resin to comply with FDA standards and can safely be used with confidence in various food machinery applications.

Stainless Steel Products
IKO offers a wide range of stainless steel products as standard. They are optimal for use in applications where oil and rust prevention oil are not preferred.

Black chrome surface treatment
Black chrome surface treatment on the track rail and slide unit of the linear motion rolling guide improves rust prevention performance. They are optimal for use in areas with rust-prone atmospheres and when rust prevention oil is not preferred.

Options for High Temperature Environments
The end seals, end plates and grease of the linear motion rolling guide can be replaced with special products that can be used in high temperature environments.
